- The fund can invest in any market or geographic sector.
- You can buy and sell shares in the fund every business day.
- The fund aims to distribute available income every six months.
- Currency hedging arrangements may be used to reduce the risk of currency movements in the value of overseas securities held by the fund.
- Recommendation: This fund may not be appropriate for investors who plan to withdraw their money within 5 years.

Risk and reward profile

- This indicator shows how much a fund may have risen and fallen in the past, and therefore how much a fund's returns may have varied. It is a measure of a fund's volatility. As the fund has less than 5 years price history, this calculation incorporates the volatility of an appropriate benchmark index. The higher a fund's past volatility the higher the number on the scale and the greater the risk that investors in that fund may have made losses as well as gains. The lowest number on the scale does not mean that a fund is risk free.
- The fund has been classed as 5 because its volatility has been measured as above average.
- This indicator is based on historical data and may not be a reliable indication of the future risk profile of this fund.
- The risk and reward profile shown is not guaranteed to remain the same and may shift over time.
- Currency Risk: As the fund invests in overseas securities, movements in exchange rates may, when not hedged, cause the value of your investment to increase or decrease.
- Concentration Risk: The fund intentionally holds a small number of investments and is not restricted by reference to any geographical region, sector or benchmark. This concentration means that the performance of a single stock within the portfolio can have a greater effect on the fund's share price. This can result in larger swings (both up and down) in the fund's value.
- For full details of the fund's risks, please see the prospectus which may be obtained from the address in 'Practical Information' below.
